PROFESSIONAL SUMMARY

Software Engineer (B.S. Software Engineering) who builds full-stack features end to end with REST/API integration and object-oriented design. Shipped customer-facing software for an FAA air-traffic surveillance system on a Java/Spring, Angular, and PostgreSQL stack (2x faster queries, ~20% better data accuracy). Now builds and maintains the automated test software for a high-volume radar production program in LabVIEW, TestStand, and Python, diagnosing system- and board-level failures down to the fix (took a key step's first-time pass rate from 0% to 100%). Targeting a mid-level (Level 2+) Software Engineer role, open to SDET / test-automation.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL, JavaScript, HTML/CSS

Frameworks & Libraries: Spring, Spring Boot, Angular, React, Flask, JUnit, Maven, JSP, NumPy, SciPy, Log4j

Databases: PostgreSQL

Cloud, DevOps & Tools: Docker, Kubernetes, Azure, Jenkins, Git, Jira, Wildfly, VS Code, IntelliJ, Eclipse

Platforms: Linux, Windows Server, Windows

Test & Automation: Automated test development, unit testing (JUnit), LabVIEW, TestStand, FPGA programming, PMIC programming, T&M hardware (signal generators/analyzers, power meters, multimeters)

Methods: Agile / Scrum, REST APIs, version control (Git), root-cause debugging

PROFESSIONAL EXPERIENCE

SRCTec

August 2025 – Present

Test Engineer | North Syracuse, NY

- Build and maintain the automated test software for a radar production program in LabVIEW, TestStand, and Python; develop in-house test applications and integrate third-party packages to support ~10 test stations against FY27 demand of 200+ units.
- Leading an initiative to raise first-time yield on a critical test station from below 50% toward an 80%+ target by identifying and eliminating false failures in the test software.
- Root-caused a system-level FPGA programming failure and added a post-programming power cycle, lifting that step's first-time pass rate from 0% to 100% and cutting it from two test runs to one (~50% less test time on the step).
- Restored production after a Windows 10-to-11 upgrade broke a board-level test's detection of TI Fusion for PMIC programming, tracing the regression to the OS change and shipping a hotfix.
- Led migration of all program test software from LabVIEW 2016 to 2021 across 4 test stations and 8 software packages in under 3 months, debugging and repairing numerous version-jump breakages.

SRCTec

June 2024 – August 2024

Test Engineering Intern | North Syracuse, NY

- Cut manual effort ~40% by automating radar test delay-line and RF-switch settings with Python over HTTPS.
- Resolved 15 issues across multiple libraries and upgraded Python 2.7 to 3.10, clearing backlog and improving testing speed ~25%.
- Migrated radar calibration software from Linux to Windows Server, improving performance and compatibility.

Saab Inc.

January 2023 – August 2023

Software Engineering Co-op | East Syracuse, NY

- Launched an Air Situation Display (ASD) feature letting users view all aircraft within a radius on click, replacing a top-aircraft-only view.
- Worked with the FAA to track objects via an Angular front end and Java back end, integrating the SysMon module into the Cooperative Surveillance System (CSS) through front-end/back-end API integration.
- Improved data accuracy ~20% by building filtering for low-quality ADS-B and MLAT data.
- Optimized PostgreSQL queries for ~2x faster data retrieval; delivered in an Agile/Scrum team.

PROJECTS

Single Pane of Glass (SPOG)

August 2024 – May 2025

Honeywell-Sponsored Senior Capstone | RIT

- Built a Honeywell-sponsored monitoring platform unifying cost, performance, and alerting across three clouds (AWS, Azure, GCP) on a cloud-hosted microservice architecture, as one of a 5-person team over a full year; focused on the front end and the user/access service.
- Developed the React front end and helped migrate the codebase from JavaScript to TypeScript, adopting Material UI for a consistent, maintainable interface.
- Implemented login/authentication, user creation, and role-based user privileges (the "Persona" access model) in the TypeScript/Express People Service (REST APIs, MongoDB).

EDUCATION

B.S. in Software Engineering | Rochester Institute of Technology (RIT)

Aug 2021 – May 2025

Rochester, NY
